

Taylor Pleated Header Track Installation Instruction

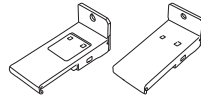

PARTS INCLUDED

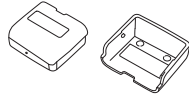

Taylor Pleated Track

Ceiling Mount Brackets
(Large and Small Sizes)

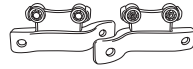

Wall Mount Brackets
(Large and Small Sizes)

Protect Pads

Screw Sets

Crossover Carrier

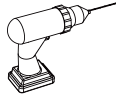

Mount Plates

NECESSARY TOOLS

Pencil

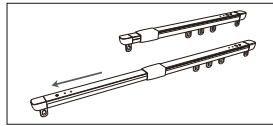

Drill

Screwdriver

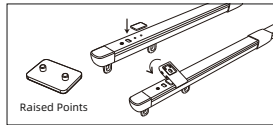

1 LENGTH ADJUSTMENT

To adjust the track length, simply pull on one side. If it's stuck, this is normal due to minor shipping collisions. Reinstall the white Connector in the middle to resolve.

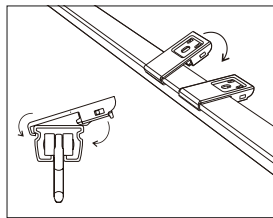

2 INSTALLING THE MOUNT PLATE

The mount plates prevent the brackets from sliding on the track. Place the side with the raised points facing down and insert them into the holes on both sides of the track. Then, install the corresponding brackets.

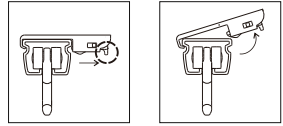

3 INSTALLING THE BRACKETS

- ▶ Match the Brackets
The larger bracket goes on the fixed track, and the smaller one goes on the adjustable track section.
- ▶ Install the Brackets
Hook the bracket onto the track's outer edge and press down until you hear a "click."

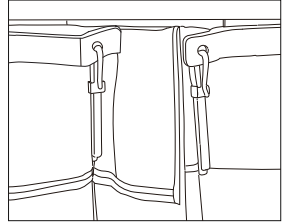

- ▶ Removing The Brackets
Press the plastic part of the bracket, move it backward, and lift it upwards to detach.

4 INSTALLING THE CROSSOVER CARRIER (FOR SPLIT PANEL)

- ▶ Remove Track Screws and Half of the Runners
Unscrew the screws at one end of the track and remove half of the runners.
- ▶ Install the Crossover Carrier
Align both carriers in the same direction, creating a circular gap in the center.
- ▶ Reinstall the Runners and End Screws
Put the runners back and secure the end screws.
- ▶ Attach the Adjustment Hooks
Hang the outermost adjustment hooks on the middle carrier and adjust them to level the curtain.

5 MOUNT INSTALLATION GUIDE

- ▶ Position the Track
Place the track against the wall (or ceiling) and confirm the final length and position. Use a pencil to mark the hole positions at both ends of the track and where the brackets will be installed.
- ▶ Mark and Drill Holes
Mark the positions and drill holes. Install expansion screws (Note: the need for expansion screws may vary depending on the wall material and is not always required).
- ▶ Install the Mount Brackets
Align the mount brackets with the marked holes on the wall (or ceiling). Secure them with screws, ensuring that they are level and properly aligned.
- ▶ Attach the Track to the Brackets
Snap the track onto the installed brackets.
- ▶ Install Protect Pad
Add the protect pads to the mounted brackets for a polished finish.
