Tyra Track

Installation Instructions

Crafted for the Place You Love Most

Tyra Ripple Fold Track Installation Instruction

PARTS INCLUDED

Taylor Pleated Track

Ceiling Mount Brackets
(Large and Small Sizes)

Wall Mount Brackets
(Large and Small Sizes)

Protect Pads

Screw Sets

Mount Plates

NECESSARY TOOLS

Pencil

Drill

Screwdriver

1 LENGTH ADJUSTMENT

To adjust the track length, simply pull on one side. If it's stuck, this is normal due to minor shipping collisions. Reinstall the white Connector in the middle to resolve.

2 INSTALLING THE MOUNT PLATE

The mount plates prevent the brackets from sliding on the track. Place the side with the raised points facing down and insert them into the holes on both sides of the track. Then, install the corresponding brackets.

3 INSTALLING THE BRACKETS

► Match the Brackets

The larger bracket goes on the fixed track, and the smaller one goes on the adjustable track section.

► Install the Brackets

Hook the bracket onto the track's outer edge and press down until you hear a "click."

► Removing The Brackets

Press the plastic part of the bracket, move it backward, and lift it upwards to detach.

4 RUNNER ADJUSTMENT INSTRUCTIONS

► Single Panel

Choose the opening direction and remove the decorative end cap on that side.

Cut and remove any extra runners, then reinstall the end cap.

► Split Panel

Cut the center connection cord to separate the left and right runners.

► Extra Runners

Cut and remove any extra runners, and reinstall the end cap.

5 MOUNT INSTALLATION GUIDE

► Position the Track

Place the track against the wall (or ceiling) and confirm the final length and position. Use a pencil to mark the hole positions at both ends of the track and where the brackets will be installed.

► Mark and Drill Holes

Mark the positions and drill holes. Install expansion screws (Note: the need for expansion screws may vary depending on the wall material and is not always required).

► Install the Mount Brackets

Align the mount brackets with the marked holes on the wall (or ceiling). Secure them with screws, ensuring that they are level and properly aligned.

► Attach the Track to the Brackets

Snap the track onto the installed brackets.

► Install Protect Pad

Add the protect pads to the mounted brackets for a polished finish.
